

NUMBERING OF APPLICATIONS AND PRIORITY APPLICATIONS – CURRENT PRACTICES

Editorial Note by the International Bureau

The following survey provides examples of application and priority application numbers currently assigned by industrial property offices (IPOs), as well as information on the codes used for indicating the type of industrial property rights, position of different parts of application number and other relevant remarks. Information on numbering systems used by the IPOs in the past is available in [Part 7.2.7](#) of the WIPO Handbook.

If this survey doesn't contain information regarding numbering practices of a certain IPO, it may be found in Part 7.2.1 of the WIPO Handbook "Presentation of application numbers" (December 2005), which was moved to the [Archive](#) in August 2017. The materials presented in Part 7.2.1 have not been updated since December 2005 and should be used with caution.

A o SPCs (Supplementary Protection Certificates)..... SZ o Utility Models / Utility certificates..... GM o International utility model applications under the PCT (PCT applications in the national phase)..... GM o Trademarks AM o Industrial designs..... MU o Layout-designs (topographies) of integrated circuits HL – Year designation: last four positions after a slash indicate the year of filing. Before the year 2000, the year designation was provided in the last two positions (for example, A 1234/95) – Serial number: fixed length of five digits, where the leading zeroes are omitted for presentation. Annual numbering system. Serial numbers of applications submitted via e-filing system start with 50001. – Code for internal use: Digit 9 in the leading position of the serial number indicates a PCT application entered the national phase in Austria (for example, A 9034/95) Digit 8 in the leading position of the serial number indicates utility model application which have been changed to a patent application (for example, A 8034/95). – Control number/Check digit: N/A <p>Note: Separators used (slash, space) are not counted for defining the position of elements of the application number.</p>

<p>AU AUSTRALIA</p>	<p>1234567</p>	<p>1234567</p>	<p>Used since: 1906 for: Trademarks</p> <p>– Description: In the above example: trademark application with serial number 1234567. – Code for the type of IP rights: N/A – Year designation: N/A – Serial number: variable length. Continuous series of numbers used for Trademark applications. The sequence is currently up to 7 digits. – Code for internal use: N/A – Control number/Check digit: N/A</p> <p>Further remarks: Prior to 1996, application numbers included an A, B, C or D before the number to indicate which part of the register they related to, for example, A599543.</p>
<p>AU AUSTRALIA</p>	<p>200401234</p>	<p>200401234</p>	<p>Used since: January 1, 1982 for: Industrial designs</p> <p>– Description: The application number consists of 9 digits. The first four digits (e.g. 1989) represent the year in which the application is filed. The next five digits (e.g. 01234) represent a serial number that uniquely identifies the application. In the above example: design application filed in 2004 with serial number 01234. – Code for the type of IP rights: N/A – Year designation: 4 digits in positions 1-4 indicate the year of filing according to Gregorian calendar – Serial number: fixed length of five digits in positions 5-9, starts from 00001 each year, sequential number – Code for internal use: N/A – Control number/Check digit: N/A</p> <p>Further remarks: Machine-readable presentation of application numbers is the same as print presentation described above.</p>
